

Evotouch Colour Zoning Manager

Evotouch Colour Zoning Manager

Part of the Evohome and Hometronic range, the Evotouch colour zoning manager is ideal for small to medium sized homes, or homes where multiple displays are needed (one on each floor, for instance). The Evotouch supports 12 zones of heating, plus a hot water zone, and works with many of the same peripheral devices as the Hometronic Manager.

Using a high-quality colour touchscreen, the Evotouch makes it very easy to set your heating controls for optimum comfort and energy efficiency, whether your day-to-day pattern of living is continuously changing or staying the same. Evotouch can be mounted on a desk charging cradle, which you can move around your home, or on a wall charging dock. It doesn't necessarily need to be on view, you can tuck it away in a cupboard if you like. The unit has rechargeable batteries, so you can remove it from the charger for an hour or two if you want to make changes to your settings in the comfort of an armchair.

What can you do with Evotouch?

From the touchscreen you can:

- view and adjust temperature settings in each room of your house
- set up time/temperature profiles for each room, for instance, you may want a room to be warm in the morning and evening, and cooler during the day.
- set the whole house into a special mode, for instance "Away" mode if you are on holiday
- turn on and off the hot water system, and change the operating times

Evotouch Colour Zoning Manager Display

The display interface is divided into several functional areas:

- Quick Actions:** A vertical sidebar on the left with buttons for Economy, Away, Day Off, Heating Off, and Custom.
- Zone Override indicators:** A row of icons at the top indicating active states like Open Window detected, Temporary Override active, Permanent Override active, Remote Override active, Economy Quick Action active, Away Quick Action active, Day Off Quick Action active, Heating Off Quick Action active, and Custom Quick Action active.
- Main Display:** Shows the current date and time (Monday 16 December 19:30) and an outside temperature of 11.5°. The central area is a grid of room temperature displays:

Living room: 22°	Kitchen: 17.5°	Bedroom 2: 12°
Dining room: 15°	Bedroom 1: 19°	Bathroom: 23°
- Hot Water:** A large display on the left showing 47°.
- Settings and Schedule:** Buttons for SETTINGS and SCHEDULE are located below the room temperature grid.
- Hot Water Status:** A red dot indicates the system is ON, and a blue dot indicates OFF.
- Room Temperature:** A section at the bottom right shows the current room temperature display.
- Temperature Selection:** A vertical list on the right allows selecting a set temperature: 25°, 22 - 24.5°, 19 - 21.5°, 16 - 18.5°, Min - 15.5°, and < 5° (Off).

Radiator Controls

Evotouch works with the latest Wireless Radiator Controller, which has an improved swivelling display with backlight, and a new sleek casing. The Radiator Controller is ideal for retrofit situations, allowing the house to be zoned without making any changes to the plumbing. Manifold radiators can also be controlled (see main brochure).

Underfloor Heating

Evotouch works with the Hometronic Underfloor Heating Controller, and allows the use of wireless sensors (either dial type, or with LCD display), or alternatively the Sensible Heat thimble sensor. Any form of underfloor heating can be controlled ("wet" or electric).

Remote Control

Evotouch has an optional Remote Access gateway, which plugs into your internet router and allows the system to be controlled from a mobile phone or tablet App (either Apple iOS or Android). For more comprehensive control from an App or PC, Sensible Heat's WebManager is also compatible with the Evotouch.

Integration with Air Conditioning systems

Using Sensible Heat's Web Interface products, the Evotouch can be integrated with a comfort cooling system to ensure that heating and cooling systems do not "fight" each other.

Integrated with AV Touchscreen systems

Again, using the Web Interface, Evotouch can be integrated with most popular Audio-Visual touchscreen systems (e.g. Control4, Crestron, Savant, RTI etc), contact Sensible Heat for further details.
